

GURGLE

and Downstream
his Friends

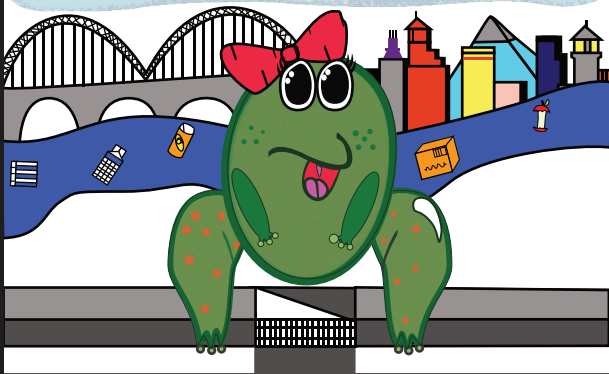

WETLANDS ARE A TYPE OF ECOSYSTEM WITH LARGE POOLS OF WATER MOST OF THE YEAR. THEY PROVIDE HABITAT FOR ANIMALS AND HAVE PLANTS FOUND NOWHERE ELSE. THEY STORE FLOOD WATERS AND RECHARGE THE AQUIFER.

THE PLANTS AND LAYERS OF SOIL IN WETLANDS FILTER CHEMICAL POLLUTION IN STORM WATER RUNOFF AND CLEAN IT UP.

MEMPHIS ONCE HAD FAR MORE WETLANDS! WEBBY WATERS IS SAD. HER WETLAND WAS DRAINED!

PEOPLE ARE RECOGNIZING THE IMPORTANCE OF WETLANDS. THIS MAKES WEBBY HAPPY!

WETLANDS ARE A GREAT PLACE FOR STORM WATER RUNOFF TO GO!
